

AlzSafe

AlzSafe

What it is?

Application AlzSafe is directed at elderly people with Alzheimer`s disease and dementia.

This app takes weight of shoulders and gives sense of freedom for people in such condition by notifying them who they are.

How it works

ProtoGrand1

This is our protoGrand called John, he's 66. John has Alzheimer's disease and attendant.

Attendant takes care of John everyday, but sometimes John disappears for long hours, he likes to exercise alone.

So attendant equips John with phone and watch each morning.

AM
I
?

ProtoGrand4

When John will be too long too far from safe location for example 15 minutes, watch will send him a bunch of notifications with proper information about him with option to call the rescue contact.

After 30 minutes attendant with Alzsafe app on phone will be also notified about Johns location
